

## Java Predicate Programming Questions

1. Write a Predicate to check if a number is even.
2. Use Predicate to check if a string is non-empty and starts with a specific letter.
3. Filter a list of integers to keep only positive numbers using Predicate and Streams.
4. Write a Predicate to validate an email string (contains "@" and ".").
5. Combine two predicates: number should be even AND greater than 10.
6. Use Predicate.or() to check if a string starts with "A" OR ends with "Z".
7. Use Predicate.negate() to filter out even numbers from a list.
8. Remove all empty or blank strings from a list using Predicate.
9. Filter a list of employee objects where salary > 50000 using Predicate.
10. Write a generic method that takes a list and a Predicate and returns a filtered list.
11. Use Predicate.isEqual() to compare a string with a constant.
12. Use Predicate in removeIf() to remove elements shorter than 5 characters.
13. Write a Predicate to check if a given year is a leap year.
14. Chain multiple predicates to validate a password: not null, > 8 chars, contains digit.
15. Write a Predicate to filter products that are in stock and price > 1000.
